***Nations Internet Service presents:***

**"Opening your own Tribal Communications Company"**, including high-speed Internet (Broadband) & VoIP (Internet Phone Service), for approximately an initial \$50K & a 5 Year contract, your Tribe can make over \$100K/yr. in profits, while providing phone & broadband internet to your Tribal Administration, Tribal Members & Native-owned businesses.

With the new WiMAX, wireless high-speed broadband internet, spectrums from the FCC approved, Tribes can now setup their own Internet & phone over internet (like Vonage) services for the cost of consulting (design), equipment & installation, and marketing. Setup your services & charge a minimal monthly charge to your Tribal members for use of the services, such as: High-speed Internet could be \$29.95/month & Phone Service may be approximately \$34.95/month.

The return-on-investment (ROI) can be a one year turn around! Within the first year, the Tribe can pay back the costs & make a \$50K profit & make over a \$100K/ yr the following years. The 5 year contract can be bought out anytime during, so that when the Tribe feels ready, they can own the system & run it on their own.

At a conference setting, this can be both a presentation & demo. A demonstration of an Internet Café can be setup for use by all the attendees. This shows how such an access can be used by other Tribal entrepreneurs once a Tribe has started their own tribally-owned telecommunications company.

This is yet another "Sovereign Design" by Internet Technology Service, LLC, a 100% Indian owned company, at [www.InternetTechnologyService.net](http://www.InternetTechnologyService.net)
